

**S A F E S U N**

**A BRIEF INTRODUCTION  
TO SAFESUN**

[www.safesuncrypto.com](http://www.safesuncrypto.com)

## OVERVIEW

SafeSun is based on proof of stack consensus and built on binance smart chain. SafeSun Smart contract is based on BEP-20 algorithm. SafeSun is currently traded on Pancakeswap. The liquidity of SafeSun on Pancakeswap is locked on DXSale for 3 years.

The secure smart contract based on Binance Smart Chain is fully decentralized. The Project holds 10% of the total supply in which they divided 5% for research and development and other 5% for marketing.

## SAFESUN NETWORK

A common misguided judgment with the overwhelming APY normal is the subjectivity of the impermanent misfortune from staking an LP (liquidity provider) in a farming reward generator. With the blast of DeFi we have seen as well numerous modern cryptocurrency miners get sucked into a high APY LP-farming trap, feeling sad as they are pushed out by prior buyers with higher staking rewards.

## LIQUIDITY POOL

Programmed LP is the mystery sauce of SAFESUN. Here we have a work that acts as a two-fold advantageous usage for holders. To begin with, the contract sucks up tokens from dealers and buyers alike, and includes them to the Liquidity pool making a strong price floor.

## Advantages of SAFESUN:

### LP lock

The liquidity for SafeSun is locked for 3 years making it trustable project.

### Growth

Integrating new Use-cases under the umbrella and implementing SafeSun swap contributes towards the growth and demand.

### Circulating Supply

The Circulating Supply of SafeSun is only 439 Billion tokens.

### Profit

The token supply is decreasing. The holders are increasing hence price is increasing.

### Pancakeswap

Pancakeswap is one of the most used DEX. You can exchange SafeSun.

### Coin Burn

SafeSun burned already more than 55% of the supply. Which brings more value to the token.

### Trade fees

4% fees is charged on each trade. 2% is redistributed to users. 2% added in liquidity.

### Holders

Holders are the people who bought and hold.

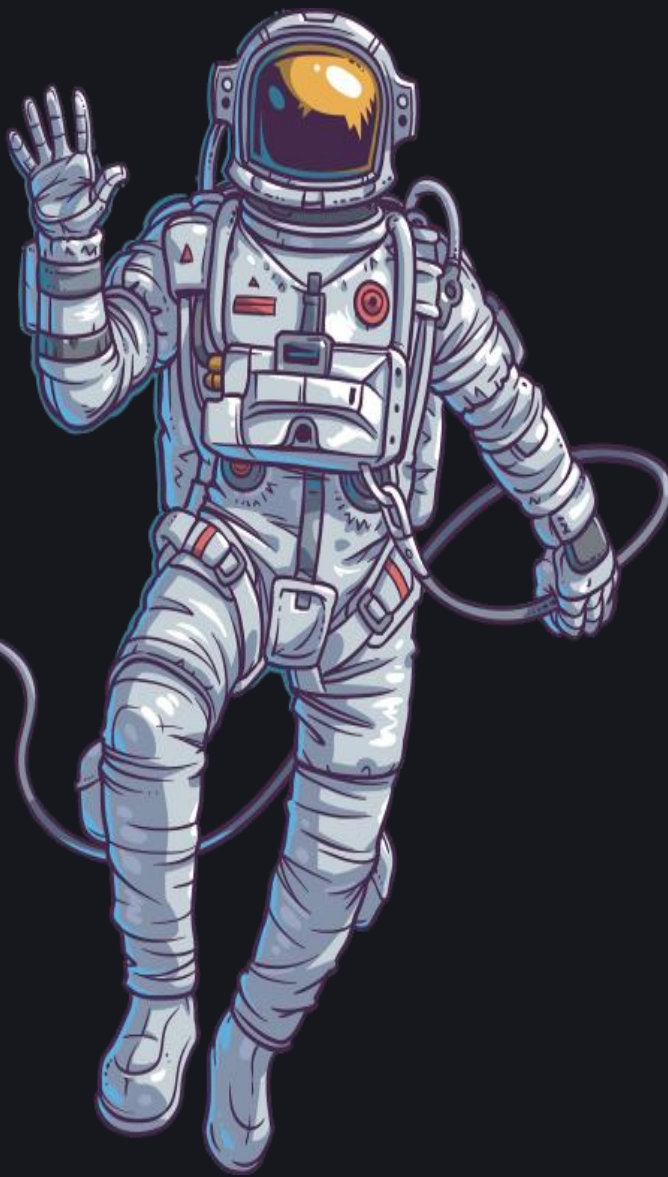

SAFESUN

Currency code:	SAFESUN
Consensus mechanism:	Proof-Of-Stack
Algorithm:	BEP-20
Cryptography:	BSC (Binance Smart Chain)
Written in:	SOLIDITY
Total Supply:	1000,000,000,000
Burned Supply:	560,173,935,895
Circulating Supply:	439,827,777,073
Website:	<a href="http://www.safesuncrypto.com">www.safesuncrypto.com</a>

# SAFESUN

## Road Map:

### 2021 Q1

- Launching Smartcontract
- Providing liquidity on pancakeswap

### 2021 Q2

- Coinmarketcap listing
- Coingecko listing

### 2021 Q3

- Launching Safesunswap

### 2021 Q4

- Airdrop for Safesunswap
- Listing of tokens on Safesunswap

### 2022 Q1

- Safesunswap Network Mainnet 2.0

### 2022 Q2

- Launching of NFT platform

### 2022 Q3

- Launching of NFT Marketplace
